EDUCATION

University of Nevada, Reno

Reno, NV

August 2022 - May 2025

Bachelor of Science in Computer Science & Engineering, Minor in Mathematics

Sierra College

Grass Valley, CA

August 2020 - May 2022

Associates of Science in Computer Science

PROJECTS

[Lucky Fruits](#) - C#, .NET 10, WinForms

A 3-wheel classic fruit slot machine with exact theoretical RTP and regulatory par sheet export

- Designed reel strips with weighted symbol counts tuned to a target RTP of 92.81%, calculated using combinatorial probability without simulation
- Implemented a math engine computing exact prize probabilities and expected values per symbol, exportable as a regulatory par sheet CSV
- Built a playable WinForms UI with spin animation, credit balance tracking, and par sheet export

Game Engine Architecture - Linux, C++, VSCode, Raylib

Class projects showcasing different game engine architectures

- Developed small, single-level games to demonstrate Ad Hoc, Component-Oriented, Entity Component, and Godot architectures
- Demonstrated strengths and weaknesses of specific architectures showing an understanding of architecture principles, optimization, and usability

Inventory Management System - Python, PostgreSQL, pgAdmin

Inventory database management system

- Designed and implemented a PostgreSQL-backed inventory management system with Python, including data ingestion, validation, and querying workflows
- Wrote SQL queries to manage and retrieve structured inventory data across multiple tables
- Built Python functions to add, remove, update, and report on inventory records

EXPERIENCE

Gameplay Programmer - [Whispers of the Veil](#)(Unity, C#, JetBrains Rider)

Isometric pixel horror game with voice integration

- Developed gameplay system including player UI (dialogue, health), enemy AI encounters, combat, and respawning/checkpoints
- Collaborated with 3 fellow students using GitHub for version control and task management
- Worked with modified DeepSpeech2 model to utilize voice commands for AI and environment interactions

Cook - Koko's Korean Kitchen | Reno, NV

- Managed kitchen operations during shifts, coordinating tasks and maintaining workflow
- Worked closely with teammates to keep operations running smoothly

TECHNICAL SKILLS

Languages: C#, C++, Python, SQL

Data: PostgreSQL, Power BI, Azure, pgAdmin

Game Dev: Unity, Unreal Engine, Raylib

Tools: Git, GitHub, JetBrains Rider, VS Code, Blender, Linux/Unix
